# Google Cardboard

Using Google Cardboard

1. Find a seat. You might be inclined to walk around while using Google Cardboard glasses without considering the furniture in the physical room you are using the device in.
2. Follow the directions on your Google Cardboard to fold the cardboard into your glasses.
3. Using any smartphone, download the free Google Cardboard app.
4. Open the Google Cardboard app.
5. When prompted, scan the QR code on your Google Cardboard glasses. The QR code looks like a black square filled with pixels.
6. Insert your phone into the phone slot in the back of the Google Cardboard glasses.
7. Look into the eyeholes and enjoy!
8. The button on the top right of the device is your "mouse," lightly press down on the button to click on functions within the virtual world.
